## What is claimed is:

- A method of facilitating trading, comprising: automatically capturing a trade between two market participants, and automatically updating a preference rating based on the trade.
- The method of claim 1, wherein the preference rating is associated with the two market participants.
- The method of claim 2, wherein the preference rating is two-sided, each of the sides corresponding to how one of the two market participants rates the other of the two market participants.
- The method of claim 1, wherein the preference rating is based on at least one threshold.
- The method of claim 4, wherein the at least one threshold is supplied by at least one of the market participants.
- The method of claim 1, wherein the preference rating is also based on information supplied by at least one of the market participants.
- The method of claim 6, wherein the information comprises a rule for determining the preference rating during the automatic updating.
- The method of claim 6, wherein the information comprises a rating for the other of the market participants.
- The method of claim 1, wherein a market participant can designate itself as anonymous.
- 10. The method of claim 1, wherein the preference rating is used in determining whether to allow or prohibit a next trade between the market participants.
- The method of claim 1, wherein the preference rating is based on comparing the trade price with a metric.
- 12. The method of claim 11, wherein the metric is a market price at a time other than the time of the trade.
  - 13. The method of claim 1, wherein the automatically updating occurs after the trade.
- The method of claim 1, wherein the automatically updating occurs at a predetermined time.

- The method of claim 1, wherein the automatically capturing and updating are performed by a market process.
- The method of claim 1, wherein the automatically capturing is performed by a market process and the automatically updating is performed by a platform process.
  - 17. A method of facilitating trading, comprising:

automatically providing a preference designation of anonymous from a first trading process to a market process, and

automatically participating in a trade at the market process with a second trading process that is unaware of the identity of the first trading process yet is able to obtain a preference rating from the market process for the first trading process.

- 18. A method of facilitating trading, comprising: automatically providing information to a preference updating process, and automatically deciding whether to trade with another market participant based on a preference rating of the other market participant determined by the preference updating process.
- 19. The method of claim 18, wherein the information comprises a rule for determining the preference rating of the other market participant.
- The method of claim 18, wherein the information comprises a rating for the other market participant.
- The method of claim 18, wherein the preference updating process is part of a platform process.
- The method of claim 18, wherein the preference updating process is part of a market process.
